CATALOGUE.

N.B. The Numbers 1 to 24 represent the 24 Linnean Classes (see Column 1st), whereas those indicating the Linnean Orders (2nd Column) and the Natural Orders (3rd Column) are arbitrary; their signification is given above (see Page 3rd). Example, *Campanula*, 5, 25, 74, belongs to the 5th Linnean Class, *Pentandria*, the flower having 5 Stamens; to the Linnean Order *Monogynia*, from its having 1 Style (Pistillum); and to the Natural Order *Campanulaceæ*, plants with Bell-shaped Flowers. See page 7.

MISCELLANEOUS FLOWER SEEDS.

The following Plants, with few exceptions, have no popular name; thus *Acacia speciosa* is rendered showy *Acacia*, &c.—In giving orders it is sufficient to mention the numbers and date of this Catalogue, 1851. N.B. The numbers being changed every year, it is absolutely necessary to say from what Catalogue they are taken.

The following plants are best known by the Popular Names, but as the Scientific Name is also necessary to show the genus to which they belong, it is also given. Such Popular Names as *Convolvulus Minor*, *Flos Adouis*, *White Candytuft*, *Columbine*, &c., have little or no affinity with the Latin, and are not to be considered as translations.

FLOWERING BULBS.				
Explanations.—fg, frame or greenhouse; gs, greenhouse or store; the others are hardy, excepting that <i>Tuberoses</i> require heat to start them. <i>Tigridias</i> , if planted before April, must be protected from frost. The best time for planting <i>Anemones</i> and <i>Ranunculus</i> is the beginning of March, but they will succeed very well if planted in May in shady situations. <i>Dahlias</i> should not be planted in the open ground till May.
